

(Toronto, Ontario, October 26, 2020) – Galway Metals Inc. (TSX-V: GWM) (the “Company” or “Galway”) is pleased to report assay results from drilling on the west and east sides of the Richard Zone at the Company’s Clarence Stream project in southwest New Brunswick, Canada ([Figure 1](#) and [Figure 2](#)). The latest results are highlighted by:

- Hole 118 intersected **9.7 grams per tonne (g/t) Au over 15.0 metres (m)**, including **267.0 g/t Au over 0.5m** with Visible Gold (VG), starting at a vertical depth of 177m below surface. The VG is 184m west of an intersection of **6.2 g/t Au over 38.5m (including 373.0 g/t Au over 0.5m)** in hole 101, and 253m west of **44.1 g/t Au over 9.5m (within 10.6 g/t Au over 47.0m, and including 495.0 g/t over 0.5m)** in hole 87. The intersect in hole 118 is also 90m west of the previous western limit of the Richard Zone, which returned **4.1 g/t Au over 16.0m** in hole 109 ([Figure 3](#))
- Hole 127 intersected **VG in 13m of quartz** on another step-out section a further 168m west of hole 118 ([VG Hole 127](#)) – assays pending. This VG is along the same section as previously-drilled hole 68, which returned **3.0 g/t Au over 12.0m**. This intersect was previously considered to be the eastern-most extent of the Jubilee Zone. Galway has now closed the previous 1km gap between the Richard and Jubilee Zones, but will undertake in-fill drilling in this area and toward Jubilee
- Hole 125 intersected **17.0 g/t Au over 5.5m**, including **163.0 g/t Au over 0.5m** with **VG**, starting at a vertical depth of 124m below surface. It is the first of 5 new holes located in the 660m gap between the Richard Zone and the GMZ, and is located 262m east of the previous eastern Richard limit defined by the discovery hole intersection that returned **7.3 g/t Au over 36.7m**. Assays are pending on the other 4 holes. This gap area between the GMZ and Richard Zones has now been reduced to 400m ([Figure 4](#)).
- Hole 128 intersected **VG in 19m of quartz**, 92m below hole 125 ([VG Hole 128](#)) – assays pending
- The intersections in holes 127 and 68 on the west side, and 125 and 128 on the east side, extend mineralization along the Richard Zone to 926m, more than double the previous 400m, down from 1.0km originally ([Figure 2](#) and [Figure 4](#))
- These results further confirm that the Jubilee, Richard and George Murphy Zones (GMZ) are part of the same mineralizing system that extends 2.5km. If the recently reported new discovery of **186.5 g/t Au over 0.6m** were included, which is directly on-trend approximately 1km SW of Jubilee, the strike length of this mineralizing system extends to 3.5km ([Figure 1](#))
- Hole 122 intersected **5.1 g/t Au over 9.0m**, including 24.7 g/t Au over 0.55m, 10.9 g/t Au over 0.65m, and 9.9 g/t Au over 0.55m, starting at a vertical depth of 225m below surface. This intersect is located 96m east from and on the same vein as the intersect

in hole 118.

- Hole 103 intersected **3.0 g/t Au over 5.45m**, which, starting at a vertical depth of 444m, is the deepest intersect at the Richard Zone to date. This compares to the previous deepest intersect of **10.0 g/t Au over 4.5m**, starting at a vertical depth of 330m below surface, and the deepest at the neighboring George Murphy Zone that returned **6.5 g/t Au over 14.05m and 4.9 g/t Au over 2.35m** at vertical depths of 321m and 335m, respectively ([Figure 5](#)).

Robert Hinchcliffe, President and CEO of Galway Metals, said, *“The Richard Zone has once again been extended and now has mineralization over at least 926 metres along strike, more than double the previous 400 metre extent. The new results east of Richard in the gap is perhaps even more exciting as they confirm the presence of high-grade gold mineralization in this previously undrilled 660m area. 8 of the highest assays at Clarence Stream are now from Galway’s new discoveries. With over \$20M in cash, Galway’s recently expanded 5-rig, 75,000m drill program is fully-funded through the end of 2021. Galway’s aim is to not only expand the existing zones, but to also continue making new discoveries to further demonstrate that Clarence Stream is an important new gold district in North America.”*

8 of the Highest-Grade Assays are from Galway’s New Discoveries

The 3 highest grade individual assays from drilling on the entire Clarence Stream property are all from 3 of Galway’s new discoveries, and now 8 of the top 12 assays are also from those 3 new discoveries. In addition to the **267.0 g/t Au over 0.5m** and **163.0 g/t Au over 0.5m** noted above, the Richard Zone also hosts **191.0 g/t Au over 0.5m** (from 54.7 g/t Au over 2.5m), **373.0 g/t Au over 0.5m** (from 6.2 g/t Au over 38.5m) and **495.0 g/t Au over 0.5m** (from 10.6 g/t Au over 47.0m), while the nearby George Murphy Zone (GMZ) has returned **807.0 g/t Au over 1.25m** (from 241.5 g/t Au over 4.2m), and **201.0 g/t Au over 0.5m** (from 13.0 g/t Au over 8.7m), plus the recently-reported wildcat hole in the newest discovery intersected **186.5 g/t Au over 0.6m** ([June 24, 2020 press release](#)).

The 660 Metre Gap Between the GMZ and Richard Zones is a Major Focus of Exploration

Holes 125 and 128 were drilled below a zone in hole 86 which intersected 1.0 g/t Au over 6.3m, and 5.8 g/t Au over 0.55m. The 660m gap between the Richard Zone discovery hole intersection and the western-most open good result (12.2 g/t Au over 2.2m in hole 104) at the GMZ is a major focus of exploration. 5 additional holes have been drilled with assays pending ([Figure 1](#)).

The West Side of Richard Continues to Return Solid Intersects

Hole 109 was the first hole released on the previous western-most section of the Richard Zone (section E). It intersected **4.1 g/t Au over 16.0m**, including 22.7 g/t Au over 1.0m, and 65.7 g/t Au over 0.5m, plus **1.0 g/t Au over 14.0m**, including 7.6 g/t Au over 1.0m, plus 1.3 g/t Au over 5.0m (VG assayed 2.2 g/t), including 3.4 g/t Au over 1.0m. Intersects have now been received from 3 other holes (holes 107, 111 and 113), with one of those holes having a significant number of assays still pending. Highlights returned to date include **1.7 g/t Au over 22.5m**, **1.3 g/t Au over 18.0m**, **1.0 g/t Au over 13.3m**, and **1.5 g/t Au over 10.0m** ([Figure 6](#)).

Holes 118, 122, and 120 all intersected what appears to be the same vein. Assays from these holes are 9.7 g/t Au over 15.0m, 5.1 g/t Au over 9.0m and 1.9 g/t Au over 9.9m ([Figure 3](#)).

New Brunswick Junior Mining Assistance Program

Galway would like to acknowledge financial support from the New Brunswick Junior Mining Assistance Program, which partially funded drilling of the GMZ, Jubilee, and Richard Zones.

Geology and Mineralization

The recent discovery of the Richard Zone in hole 12 contains elevated levels of bismuth, arsenopyrite, and antimony, in multiple quartz veins, with tungsten in the vicinity. This is similar to other Clarence Stream deposits, which can be characterized as intrusion-related quartz-vein hosted gold deposits. Richard Zone contains multiple zones of quartz veining with sulfides and sericite alteration. In general, mineralization at Clarence Stream consists of 10-70% quartz stockworks and veins with 1-5% fine pyrite plus pyrrhotite plus arsenopyrite plus stibnite in sericite altered sediments. The Jubilee mineralization consists of 2%-5% disseminated pyrite, sphalerite, galena, arsenopyrite, chalcopyrite, and pyrrhotite in sediments with white to smoky grey quartz veining. Locally there is up to 10% sphalerite and semi-massive galena veinlets. The 2.5 km trend that hosts the GMZ, Richard and Jubilee Zones contains a mineralized mafic intrusive locally - similar to the South Zone, which currently hosts most of the property's last reported gold resources (September 2017). A more complete description of Clarence Stream's geology and mineralization can be found at www.galwaymetalsinc.com.

Review by Qualified Person, Quality Control and Reports

Michael Sutton, P.Geo., Director and VP of Exploration for Galway Metals, is the Qualified Person who supervised the preparation of the scientific and technical disclosure in this news release on behalf of Galway Metals Inc. All core, chip/boulder samples, and soil samples are assayed by Activation Laboratories, 41 Bittern Street, Ancaster, Ontario, Canada, who have ISO/IEC 17025 accreditation. All core is under watch from the drill site to the core processing facility. All samples are assayed for gold by Fire Assay, with gravimetric finish, and other elements assayed using ICP. The Company's QA/QC program includes the regular insertion of blanks and standards into the sample shipments, as well as instructions for duplication. Standards, blanks and duplicates are inserted at one per 20 samples. Approximately five percent (5%) of the pulps and rejects are sent for check assaying at a second lab with the results averaged and intersections updated when received. Core recovery in the mineralized zones has averaged 99%.

About the Company

Galway Metals is well capitalized with two gold projects in Canada, Clarence Stream, an emerging gold district in New Brunswick, and Estrades, the former producing, high-grade VMS mine in Quebec. The Company began trading on January 4, 2013, after the successful spinout to existing shareholders from Galway Resources following the completion of the US\$340 million sale of that company. With substantially the same management team and Board of Directors, Galway Metals is keenly intent on creating similar value as it had with Galway Resources.

CAUTIONARY STATEMENT: Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy of this news release. No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein.

This news release contains forward-looking information which is not comprised of historical facts. Forward-looking information involves risks, uncertainties and other factors that could cause actual events, results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking information. Forward-looking information in this news release includes statements made herein with respect to, among other things, the Company's objectives, goals or future plans, potential corporate and/or property acquisitions, exploration results, potential mineralization, exploration and mine development plans, timing of the commencement of operations, and estimates of market conditions. Factors that could cause actual results to differ materially from such forward-looking information include, but are not limited to, exploration results being less favourable than anticipated, capital and operating costs varying significantly from estimates, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects, risks associated with the defence of legal proceedings and other risks involved in the mineral exploration and development industry, as well as those risks set out in the Company's public disclosure documents filed on SEDAR. Although the Company believes that management's assumptions used to develop the forward-looking information in this news release are reasonable, including that, among other things, the Company will be able to identify and execute on opportunities to acquire mineral properties, exploration results will be consistent with management's expectations, financing will be available to the Company on favourable terms when required, commodity prices and foreign exchange rates will remain relatively stable, and the Company will be successful in the outcome of legal proceedings, undue reliance should not be placed on such information, which only applies as of the date of this news release, and no assurance can be given that such events will occur in the disclosed time frames or at all. The Company disclaims any intention or obligation to update or revise any forward-looking information contained herein, whether as a result of new information, future events or otherwise, except as required by applicable securities laws.
