

(Toronto, Ontario, March 30, 2021) - Galway Metals Inc. (TSX-V: GWM) (the "Company" or "Galway") is pleased to report new drill results from the northern veins of the George Murphy Zone (GMZ), and from the nearby Adrian Zone at the Clarence Stream Gold Project in SW New Brunswick ([Figure 1](#), and [Figure 2](#), and [Figure 3](#)). The main takeaways from drill results are as follows:

- The northern GMZ veins appear to be connecting to the Adrian Zone to give a combined horizontal strike length of 450m to date. Hole CL20-84, for which visible gold (VG) was previously reported but no assays were received, returned **64.6 g/t Au over 0.5m** within a broader intersection of **3.0 g/t Au over 15.5m**, located 35m east of previously-reported hole CL20-50 (**4.8 g/t Au over 34.0m**, including **20.2 g/t Au over 7.0m**). New hole CL21-51 returned **9.0 g/t Au over 7.4m**, including **20.3 g/t Au over 1.5m** and **19.9 g/t Au over 1.5m**, located 79m west of hole CL20-50. New hole CL21-53 returned **3.0 g/t Au over 30.5m**, including **26.5 g/t Au over 3.0m**. Other new intersections between the veins to the north of the GMZ and the Adrian Zone include **1.3 g/t Au over 41.5m**, **2.1 g/t Au over 7.5m**, **2.9 g/t Au over 7.75m**, **2.2 g/t Au over 9.0m** and **1.7 g/t Au over 13.8m**.
- Two new veins were also discovered in hole CL21-51, returning **70.3 g/t Au over 1.5m**, including **104.2 g/t Au over 1.0m**; plus **7.2 g/t Au over 1.5m**, located 115m north of the 9.0 g/t Au over 7.4m intersect discussed above and 290m west of the western-most intersection of the Adrian Zone. These two new veins are near the interpreted location of the Sawyer Brook Fault and extends the depth of the GMZ/Adrian Zones by 50m to 385m. The previous deepest significant intersects were in hole BL20-88, which extended mineralization on the west side of the GMZ to 321m and 335m with **6.5 g/t Au over 14.05m** and **4.9 g/t Au over 2.35m**, respectively.
- High grades continue to be returned from the new Adrian Zone, with hole CL21-89 returning **78.4 g/t Au over 3.0m**, including **313.0 g/t Au over 0.5m**, and **147.0 g/t Au over 0.5m**. This intersect is located 7m above the **24.3 g/t Au over 6.55m** (previously-released as **33.7 g/t over 4.7m**) in hole CL20-81 and 28m northeast of the Discovery Hole intersect in hole CL20-65 that returned **13.4 g/t Au over 12.95m**.
- **Abundant VG in hole CL21-92** ([see photos](#)) extended the Adrian Zone 16m east of the same zone in hole CL-20-82, which returned **1.5 g/t Au over 14.6m** (previously reported as 1.5 g/t Au over 13.9m).

"The new northern GMZ veins and Adrian Zone discoveries continue to expand and are open in every direction; all zones at Clarence Stream remain open for expansion in all directions. The Adrian Zone now looks to be 450m in strike length, which represents a substantial increase from 102m before the current drill results connected it with the GMZ north veins.

The width of the zone remains at 266m, excluding the new GMZ/Adrian veins to the north. These new veins are starting to be drilled with very nice 104.2 g/t, 313.0 g/t, and 147.0 g/t gold assays received. The four highest-grade gold assays received from drilling at Clarence Stream, and nine of the top 12 have been returned from the three new zones discovered by Galway - the Adrian, GMZ and Richard," cites Robert Hinchcliffe, President and CEO of Galway Metals.

New Adrian Zone Assay Highlights

- CL21-89: **78.4 grams per tonne (g/t) Au over 3.0 metres (m)**, including **313.0 g/t Au over 0.5m**, and **147.0 g/t Au over 0.5m**, at a vertical depth of 164m below surface
- CL21-92: Significant VG present at 301m below surface; this represents the furthest northeast intersection to date

New GMZ North Veins Assay Highlights

- CL21-84: **3.0 g/t Au over 15.5m**, including **64.6 g/t Au over 0.5m (VG)** at 188m below surface; located 35m east of hole CL20-50 (**4.8 g/t Au over 34.0m**)
- CL21-51: **9.0 g/t Au over 7.4m**, including **20.3 g/t Au over 1.5m**, and **19.9 g/t Au over 1.5m**, located 79m west of hole CL20-50 (**4.8 g/t Au over 34.0m**); plus **70.3 g/t Au over 1.5m**, including **104.2 g/t Au over 1.0m**; plus **7.2 g/t Au over 1.5m, (new veins)** starting at respective vertical depths of 165m, 372m, and 385m below surface
- CL21-52: **1.3 g/t Au over 41.5m**, including **4.7 g/t Au over 6.0m**, and 5.7 g/t Au over 0.5m, starting at 193m below surface
- CL21-53: **3.0 g/t Au over 30.5m**, including **26.5 g/t Au over 3.0m**, plus **0.8 g/t Au over 17.0m**, starting at respective vertical depths of 50m, and 115m below surface
- CL21-55: **2.2 g/t Au over 9.0m**, including 5.3 g/t Au over 1.15m, starting at a vertical depth of 71m, below surface
- CL21-49: **2.1 g/t Au over 7.5m**, starting at 198m below surface
- CL21-63: **2.9 g/t Au over 7.75m**, including 7.9 g/t Au over 1.0m, and 8.0 g/t Au over 1.0m; plus **1.6 g/t Au over 12.0m**, including 7.1 g/t Au over 1.5m, starting at respective vertical depths of 127m, and 43m below surface
- CL21-64: **1.7 g/t Au over 13.8m**, including **14.6 g/t Au over 0.85m**; plus **29.9 g/t Au over 0.85m**; plus 1.1 g/t Au over 10.7m, starting at respective vertical depths of 150m, 175m, and 182m below surface
- ****Hole CL-81: 24.3 g/t Au over 6.55m**, (previously reported **33.7 g/t Au over 4.7m**), including **60.7 g/t Au over 2.15m**, which includes **89.6 g/t Au over 0.5m**, starting at a vertical depth of 169m

- ****Hole CL-79: 1.1 g/t Au over 13.4m**, (previously reported 1.2 g/t Au over 3.4m), including 6.8 g/t Au over 1.0m, starting at a vertical depth of 154m
- ****Hole CL-82: 1.5 g/t Au over 14.6m**, (previously reported 1.5 g/t Au over 13.9m), including 8.7 g/t Au over 1.05m and 4.2 g/t Au over 0.6m, starting at a vertical depth of 68m

** Additional assays received.

The GMZ North Veins and Adrian Zone is Connected; System is now 2.8 KM

The Adrian, GMZ, Richard and Jubilee Zones have been discovered (or drilled) by Galway after the last resource estimate was released in September 2017. They are successfully being connected; only small gaps remain to be drilled. The new intersections between the veins to the north of the GMZ and the Adrian Zone appear to be connecting the two into one with a horizontal strike length of 450 metres. The northern portion appears to be complicated. While the new intersection of **78.4 g/t Au over 3.0m** in hole CL21-89 is located north of and at a higher elevation than the previously reported **33.7 g/t Au over 4.7m** (now **24.3 g/t Au over 6.55m**) from the same vein (giving a south dip like all the other veins in the system), the discovery hole intersect on the same vein of **13.4 g/t Au over 12.95m** is located 21m south of the 24.3 g/t Au over 6.55m and at a higher elevation, giving a north dip. Another hole with what is thought to be the same vein intersected **1.5 g/t Au over 34.3 m** (including 25.9 g/t Au over 0.75m-VG), is located at a much higher elevation and is further southeast, also giving a north dip. Folding is thought to be responsible for differing dips.

Galway’s discoveries and subsequent significant expansions of the Adrian ([July 29, 2020](#)), GMZ ([December 18, 2017](#)) and Richard Zones ([January 23, 2019](#)), and the Company’s successful expansions of the Jubilee, North and South Zones demonstrate that **Clarence Stream is an emerging new gold district in North America.**

VG = visible gold. 0.42 g/t Au was used for the bottom cut-off; True widths are unknown if not noted; all VG samples are done with metallic screen assays; ** previously released.

New Brunswick Junior Mining Assistance Program

Galway would like to acknowledge financial support from the New Brunswick Junior Mining Assistance Program, which partially funded drilling of the GMZ, Jubilee, Adrian, and Richard Zones.

Geology and Mineralization

The discovery of the Richard Zone in hole 12 contains elevated levels of bismuth, arsenopyrite, and antimony, in multiple quartz veins, with tungsten in the vicinity. This is similar to other Clarence Stream deposits, which can be characterized as intrusion-related quartz-vein hosted gold deposits. Richard Zone contains multiple zones of quartz veining with sulfides and sericite alteration. In general, mineralization at Clarence Stream consists of 10-70% quartz stockworks and veins with 1-5% fine pyrite plus pyrrhotite plus arsenopyrite plus stibnite in sericite altered sediments. The Jubilee mineralization consists of 2%-5% disseminated pyrite, sphalerite, galena, arsenopyrite, chalcopyrite, and pyrrhotite in sediments with white to smoky grey quartz veining. Locally there is up to 10% sphalerite and semi-massive galena veinlets. The 2.5 km trend that hosts the GMZ, Richard and Jubilee Zones contains a mineralized mafic intrusive locally - similar to the South Zone, which currently hosts most of the property's last reported gold resources (September 2017). A more complete description of Clarence Stream's geology and mineralization can be found at www.galwaymetalsinc.com.

Review by Qualified Person, Quality Control and Reports

Michael Sutton, P.Geo., Director and VP of Exploration for Galway Metals, is the Qualified Person who supervised the preparation of the scientific and technical disclosure in this news release on behalf of Galway Metals Inc. All core, chip/boulder samples, and soil samples are assayed by Activation Laboratories, 41 Bittern Street, Ancaster, Ontario, Canada, who have ISO/IEC 17025 accreditation. All core is under watch from the drill site to the core processing facility. All samples are assayed for gold by Fire Assay, with gravimetric finish, and other elements assayed using ICP. The Company's QA/QC program includes the regular

insertion of blanks and standards into the sample shipments, as well as instructions for duplication. Standards, blanks and duplicates are inserted at one per 20 samples. Approximately five percent (5%) of the pulps and rejects are sent for check assaying at a second lab with the results averaged and intersections updated when received. Core recovery in the mineralized zones has averaged 99%.

About the Company

Galway Metals is well capitalized with two gold projects in Canada, Clarence Stream, an emerging gold district in New Brunswick, and Estrades, the former producing, high-grade VMS mine in Quebec. The Company began trading on January 4, 2013, after the successful spinout to existing shareholders from Galway Resources following the completion of the

Galway Metals Reports 78.4 g/t Au over 3.0m, 9.0 g/t Au over 7.4m, 3.0 g/t Au over 30.5m and a New Vein Discovery of 70.3 g/t Au over 1.5m at Clarence Stream | 11

US\$340 million sale of that company. With substantially the same management team and Board of Directors, Galway Metals is keenly intent on creating similar value as it had with Galway Resources.

CAUTIONARY STATEMENT: Neither the TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy of this news release. No stock exchange, securities commission or other regulatory authority has approved or disapproved the information contained herein.

This news release contains forward-looking information which is not comprised of historical facts. Forward-looking information involves risks, uncertainties and other factors that could cause actual events, results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking information. Forward-looking information in this news release includes statements made herein with respect to, among other things, the Company's objectives, goals or future plans, potential corporate and/or property acquisitions, exploration results, potential mineralization, exploration and mine development plans, timing of the commencement of operations, and estimates of market conditions. Factors that could cause actual results to differ materially from such forward-looking information include, but are not limited to, exploration results being less favourable than anticipated, capital and operating costs varying significantly from estimates, delays in obtaining or failures to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects, risks associated with the defence of legal proceedings and other risks involved in the mineral exploration and development industry, as well as those risks set out in the Company's public disclosure

documents filed on SEDAR. Although the Company believes that management's assumptions used to develop the forward-looking information in this news release are reasonable, including that, among other things, the Company will be able to identify and execute on opportunities to acquire mineral properties, exploration results will be consistent with management's expectations, financing will be available to the Company on favourable terms when required, commodity prices and foreign exchange rates will remain relatively stable, and the Company will be successful in the outcome of legal proceedings, undue reliance should not be placed on such information, which only applies as of the date of this news release, and no assurance can be given that such events will occur in the disclosed time frames or at all. The Company disclaims any intention or obligation to update or revise any forward-looking information contained herein, whether as a result of new information, future events or otherwise, except as required by applicable securities laws.
